S 4 1/2 Sense of looking down square  
ground level

Site is a land/structures/water interface.

Several structures are at site; some that are rounded; one that is flat; one that is large with a sense of being stacked.

One structure is long, wide, deep (below ground level) open at top but perhaps can be covered over. Sense of purpose of construction/modification/repair/etc.

Something is constructed in this "bay" structure, which is <sup>very</sup> large; has many rounded surfaces, + which when completed is moved out ponderously <sup>apparently</sup> into water. Strong association of dry dock + a ship or submarine.

end.
